

```
import heapq

def dijkstra(graph, start):
    # Inisialisasi jarak
    distances = {node: float('inf') for node in graph}
    distances[start] = 0

    # Priority Queue
    pq = [(0, start)]

    # Menyimpan jalur
    previous = {node: None for node in graph}

    while pq:
        current_distance, current_node = heapq.heappop(pq)

        # Skip jika sudah lebih besar
```
